

PEGMATITIC

Meaning: PEGMATITIC refers to a texture in igneous rocks characterized by the presence of exceptionally large crystals, typically formed from the slow cooling of magma.

1. The pegmatitic texture of the rock revealed an abundance of large crystals, each showcasing intricate patterns.
2. Geologists often study pegmatitic formations to understand the conditions under which these rare minerals crystallized.
3. In some regions, pegmatitic deposits contain valuable gemstones that are sought after by collectors and jewelers alike.
4. The pegmatitic nature of the granite indicates a slow cooling process deep within the Earth's crust.
5. Mineral enthusiasts flock to pegmatitic sites, hoping to discover unique specimens not found in more common rock types.
