

# PENGOLIN

*Meaning: A pangolin is a scaly anteater known for its protective keratin scales and its diet primarily consisting of ants and termites.*

1. The pangolin is often referred to as the world's most trafficked mammal due to its scales.
2. In the wild, a pangolin uses its long tongue to extract ants and termites from their nests.
3. Conservationists are working hard to protect pangolins from poaching and habitat loss.
4. Despite their armor-like appearance, pangolins are gentle creatures that prefer to curl up when threatened.
5. Many people are unaware that pangolins play a crucial role in their ecosystems by controlling insect populations.
