

# PERISSODACTYL

*Meaning: Perissodactyl refers to a group of hoofed mammals characterized by an odd number of toes, including species like horses and rhinoceroses.*

1. The perissodactyls, such as horses and rhinos, have an odd number of toes on each foot.
2. Scientists classify the horse as a perissodactyl due to its single hoof structure.
3. Perissodactyls play a crucial role in their ecosystems by influencing vegetation through grazing.
4. The fossil record reveals that ancient perissodactyls were once much more diverse than today.
5. Conservation efforts are important for preserving the habitats of modern perissodactyl species.
