

PEROXIDATION

Meaning: Peroxidation is the oxidative degradation of lipids, often resulting in damage to cellular membranes and biological systems.

1. Peroxidation is a critical process that can lead to the degradation of lipids in biological systems.
2. The study focused on the effects of peroxidation on cellular membranes and their integrity.
3. Increased levels of reactive oxygen species often trigger lipid peroxidation, impacting cell function.
4. Researchers are investigating the link between peroxidation and various chronic diseases.
5. Antioxidants play a vital role in preventing peroxidation and protecting cells from oxidative stress.
