

# PHACOID

*Meaning: Phacoid refers to a lens-like or lens-shaped structure, particularly in biological contexts, such as in jellyfish or the eye.*

1. The phacoid structure of the jellyfish contributes to its buoyancy in water.
2. Researchers examined the phacoid layer of the eye to understand its role in vision.
3. In certain marine organisms, the phacoid helps protect delicate tissues from environmental stresses.
4. Understanding the formation of phacoids can provide insights into evolutionary adaptations.
5. The phacoid is a critical component in the study of lens development in vertebrates.
