

PHENOLPHTHALEIN

Meaning: Phenolphthalein is a chemical compound used as a pH indicator that changes color in response to acidity or alkalinity, typically turning pink in basic solutions.

1. Phenolphthalein is commonly used as an indicator in acid-base titrations.
2. In the presence of a strong base, phenolphthalein changes color from colorless to pink.
3. The laboratory technician carefully measured phenolphthalein for the experiment.
4. Students often learn about phenolphthalein in their chemistry classes when studying pH indicators.
5. Phenolphthalein is also used in certain medical tests to assess gastric acidity.
