

PHOSPHATURIA

Meaning: Phosphaturia is the excretion of an excessive amount of phosphate in the urine, often indicating potential renal dysfunction.

1. Phosphaturia can indicate an underlying renal issue that warrants further investigation.
2. The presence of phosphaturia in the patient's urine was surprising given their normal dietary intake of phosphate.
3. Doctors often assess phosphaturia to better understand a patient's metabolic status.
4. In some cases, phosphaturia can lead to symptoms such as fatigue and bone pain due to mineral imbalances.
5. A diet high in protein may influence the levels of phosphaturia observed in certain individuals.
