

PHOSPHINIC

Meaning: Phosphinic refers to a chemical compound or acid that contains phosphorus and has properties related to phosphine, typically involved in reduction reactions and exhibiting catalytic characteristics.

1. Phosphinic acid is often used as a reducing agent in various chemical reactions.
2. Researchers have discovered that phosphinic compounds can exhibit unique catalytic properties.
3. The synthesis of phosphinic derivatives plays a crucial role in modern organic chemistry.
4. Phosphinic ligands are essential in the coordination chemistry of transition metals.
5. In agricultural applications, phosphinic substances can help enhance plant growth and resistance.
