

PHOSPHORESCENCE

Meaning: Phosphorescence is the phenomenon of emitting light without heat, typically observed in certain materials or organisms that glow in the dark, as seen in the ocean's waves or on sandy beaches.

1. The ocean was alive with the mesmerizing glow of phosphorescence, illuminating the waves in a mystical blue light.
2. Children gathered on the beach at night, fascinated by the phosphorescence that sparkled beneath their feet.
3. Scientists study phosphorescence to better understand the natural phenomena that occur in certain marine organisms.
4. The artist used phosphorescence in her painting, creating a work that transformed under the glow of a blacklight.
5. During the summer nights, the lake would shimmer with phosphorescence, captivating all who witnessed the spectacle.
