

PHOTOMAGNETIC

Meaning: Photomagnetic refers to the property of certain materials that exhibit changes in magnetism when exposed to light.

1. The photomagnetic effect can be observed in certain materials when exposed to light.
2. Researchers are exploring photomagnetic materials for potential applications in data storage.
3. Photomagnetic phenomena have intrigued scientists due to their unique interactions between light and magnetism.
4. The development of photomagnetic devices could revolutionize the field of optoelectronics.
5. Understanding the underlying mechanisms of photomagnetic behavior is essential for advancing technology.
