PHOTOSPHERIC

Meaning: Photospheric refers to the outer layer of a star, particularly the sun, from which light is emitted and observed.

1. The photospheric layer of the sun is where most of the sunlight we see originates.
2. Scientists study the photospheric temperature to understand solar activity and its effects on Earth.
3. During a solar eclipse, the photospheric light is obscured, revealing the sun's outer corona.
4. Variations in the photospheric brightness can indicate the presence of sunspots and solar flares.
5. Astronomers use advanced telescopes to capture detailed images of the photospheric surface.
