

PHOTOSYNTHESIS

Meaning: Photosynthesis is the process by which green plants, algae, and some bacteria convert light energy into chemical energy, using carbon dioxide and water to produce glucose and oxygen.

1. Photosynthesis is the process by which green plants convert sunlight into energy.
2. During photosynthesis, chlorophyll captures light energy to transform carbon dioxide and water into glucose.
3. Understanding photosynthesis is crucial for addressing climate change and food security.
4. The efficiency of photosynthesis can significantly affect crop yields in agricultural practices.
5. Research into photosynthesis has led to innovations in renewable energy sources and sustainable technologies.
