

PHYSICOCHEMICAL

Meaning: Physicochemical refers to the physical and chemical properties and interactions of substances, particularly in the context of their behavior and applications in various fields.

1. The study of the physicochemical properties of the new material revealed its potential for a wide range of applications.
2. Researchers investigated the physicochemical interactions between the drug and the polymer matrix to enhance its stability.
3. Understanding the physicochemical characteristics of the solvent is crucial for optimizing the reaction conditions.
4. The physicochemical analysis provided insights into the solubility and permeability of the compound in various environments.
5. Her research focused on the physicochemical effects of temperature changes on the reaction kinetics of the catalyst.
