

PIPEVINE

Meaning: Pipevine refers to a type of flowering plant, particularly from the genus Aristolochia, known for its distinctive tubular flowers and its role as a host for certain butterfly larvae.

1. The pipevine's unique flowers attract a variety of pollinators in the garden.
2. Many butterflies rely on pipevine plants as a host for their larvae.
3. In the wild, the pipevine grows in moist, shady areas, often near streams.
4. The vibrant coloration of the pipevine can add an exotic touch to any landscape.
5. Botanists study the pipevine for its fascinating relationship with specific moth species.
