

PISTON

Meaning: A piston is a cylindrical component in an engine that moves up and down within a cylinder to convert pressure into mechanical work.

1. The mechanic carefully examined the piston for any signs of wear and tear.
2. In a car engine, the piston moves up and down to generate power.
3. Replacing a damaged piston can significantly improve an engine's performance.
4. As the piston compresses the fuel-air mixture, it prepares for ignition.
5. High-performance engines often feature specially designed pistons for enhanced efficiency.
