

PLACODERMATA

Meaning: Placodermata is a class of extinct jawed vertebrates characterized by bony plates covering their head and thorax, prominent during the Devonian period.

1. Placodermata were some of the earliest jawed vertebrates, showcasing a remarkable evolutionary adaptation.
2. The fossil record reveals that Placodermata flourished during the Devonian period, often referred to as the "Age of Fishes."
3. Researchers study Placodermata to better understand the transition from armored fish to more modern vertebrate forms.
4. The unique bony plates of Placodermata provide insights into the diversity of prehistoric marine life.
5. Recent discoveries of Placodermata fossils have led to new theories about the evolution of early vertebrate anatomy.
