

PLACOIDES

Meaning: Placoides are small, tooth-like scales on the skin of cartilaginous fish, such as sharks and rays, that help reduce drag in water.

1. Placoides are a type of scale found on the skin of cartilaginous fish like sharks and rays.
2. The unique structure of placoides helps reduce drag as the fish swims through water.
3. Researchers are studying the evolution of placoides to better understand fish adaptation over time.
4. In some marine environments, placoides serve as a protective barrier against parasites and injuries.
5. The fossil record shows that placoides have been present in species for millions of years.
