

PLANETOID

Meaning: A planetoid is a small celestial body that orbits the sun and resembles a planet, often considered in classification discussions between planets and asteroids.

1. The astronomers discovered a new planetoid in the outer reaches of the solar system.
2. Scientists are debating whether the planetoid should be classified as a planet or a mere asteroid.
3. Explorations of the distant planetoid revealed intriguing geological features.
4. The planetoid's orbit brings it close to Earth every few decades, sparking interest among researchers.
5. Some believe that planetoids could hold clues about the early formation of our solar system.
