

PLATINICHLORIC

Meaning: Platinichloric refers to a compound or acid containing platinum and chlorine, commonly used in the synthesis of platinum compounds and characterized by stability in high-temperature conditions.

1. Platinichloric acid is often used in the synthesis of various platinum compounds.
2. The platinichloric complex demonstrated remarkable stability under high temperatures.
3. Researchers observed that platinichloric solutions exhibited unique electrochemical properties.
4. In their experiments, they carefully measured the concentration of platinichloric ions.
5. The platinichloric crystal structure revealed insights into its catalytic behavior.
