

PLEURAL

Meaning: Pleural refers to anything related to the pleura, the membrane surrounding the lungs and lining the chest cavity.

1. The pleural cavity is essential for reducing friction during lung expansion and contraction.
2. Doctors often perform a pleural effusion analysis to diagnose various respiratory conditions.
3. Infections can lead to pleural thickening, which may impair lung function over time.
4. Patients with pleural mesothelioma often face a challenging prognosis due to the aggressive nature of the disease.
5. The presence of pleural fluid can be an indicator of underlying health issues, such as heart failure or pneumonia.
