

# PLEUROPERICARDIAL

*Meaning: Pleuropericardial refers to the anatomical membranes or spaces that separate the pleura (lung lining) from the pericardium (heart lining).*

1. The pleuropericardial membranes play a crucial role in separating the lungs from the heart.
2. During fetal development, the pleuropericardial space is formed between the pleura and the pericardium.
3. An abnormality in the pleuropericardial structure can lead to complications in cardiac function.
4. Surgeons must carefully navigate the pleuropericardial region during thoracic procedures.
5. Understanding the anatomy of the pleuropericardial area is essential for diagnosing certain medical conditions.
