

POIKILOTHERMOUS

Meaning: Poikilothermous refers to organisms, particularly animals, that cannot internally regulate their body temperature and instead depend on external environmental conditions for thermal regulation.

1. Poikilothermous animals, such as reptiles and amphibians, rely on external heat sources to regulate their body temperature.
2. As poikilothermous species can thrive in varying climates, they often exhibit remarkable adaptability.
3. Understanding the poikilothermous nature of certain fish can provide insights into their behavior during seasonal changes.
4. The poikilothermous lifestyle of some invertebrates allows them to survive in fluctuating environmental conditions.
5. Researchers are studying how climate change impacts poikilothermous organisms in coastal ecosystems.
