

POLLEN

Meaning: Pollen is a fine powder produced by flowering plants that contains male gametes and is transferred by wind or animals for fertilization.

1. The vibrant colors of the flowers were a clear signal for bees to gather pollen.
2. During spring, many people suffer from allergies due to the high levels of pollen in the air.
3. Plants rely on pollen to reproduce and produce the next generation of flowers and seeds.
4. The golden dust of pollen settled on the car, marking the arrival of the new season.
5. Beekeepers carefully manage their hives to ensure a steady supply of pollen for their bees.
