

POLLINCTOR

Meaning: Pollinctor: a substance, organism, or agent that transfers pollen from one flower to another, facilitating plant reproduction.

1. The pollinator plays a crucial role in the life cycle of many plants by transferring pollen from one flower to another.
2. Bees are often considered the most efficient pollinators due to their ability to visit multiple flowers in a single trip.
3. Gardening enthusiasts are increasingly planting pollinator-friendly flowers to support local ecosystems.
4. Without pollinators like butterflies and hummingbirds, many crops would fail to produce fruit.
5. Conservation efforts are essential to protect pollinators from habitat loss and pesticide exposure.
