

# POLYMER

*Meaning: A polymer is a large molecule composed of repeating structural units, typically connected by covalent chemical bonds, that can form materials with diverse properties and applications.*

1. Polymer science has revolutionized various industries by enabling the development of new materials.
2. The plastic jug is made from a lightweight polymer that is both durable and flexible.
3. Researchers are exploring biodegradable polymers as an eco-friendly alternative to traditional plastics.
4. Synthetic polymers have unique properties that allow them to be used in everything from clothing to medical devices.
5. The discovery of polymers in nature has led to significant advancements in the field of biochemistry.
