

POLYNUCLEOLAR

Meaning: Polynucleolar refers to a cellular structure characterized by the presence of multiple nucleoli, which are involved in the organization and regulation of genetic material.

1. The polynucleolar structure was observed under the microscope, revealing complex cellular organization.
2. Researchers are investigating the role of polynucleolar regions in gene expression regulation.
3. In certain plant cells, polynucleolar configurations can indicate stress responses to environmental factors.
4. The presence of polynucleolar bodies in the tissue sample suggested a potential pathological condition.
5. Advanced imaging techniques allow scientists to study the dynamics of polynucleolar formations in real time.
