

POSITIVISM

Meaning: Positivism is a philosophical theory that asserts that knowledge is primarily derived from empirical evidence and observable phenomena.

1. Positivism emphasizes the importance of empirical data in the development of knowledge.
2. The philosopher's work was heavily influenced by the principles of positivism in understanding human behavior.
3. Many scientists advocate for a positivist approach to ensure that their findings are grounded in observable reality.
4. Critics of positivism argue that it neglects the subjective experiences that shape human understanding.
5. In the social sciences, positivism has sparked debates about the validity of qualitative versus quantitative research methods.
