

PRISM

Meaning: Prism: a transparent optical element that refracts light, typically in the shape of a solid geometric figure, causing it to disperse into a spectrum of colors.

1. The sunlight filtered through the prism, scattering into a beautiful spectrum of colors.
2. In science class, we learned how a prism can bend light and separate it into its various wavelengths.
3. The artist used a prism to inspire her latest painting, capturing the vibrant hues it created.
4. During the experiment, the students observed how the prism refracted the laser beam into a rainbow.
5. A crystal prism hung in the window, casting colorful patterns across the room when sunlight hit it.
