

# PRODUCTIVITY

*Meaning: Productivity is the measure of efficiency in producing goods or services, often assessed by the output generated per unit of input in a workplace setting.*

1. Increasing productivity in the workplace often requires a combination of effective time management and the right resources.
2. Many companies invest in employee training programs to boost overall productivity and job satisfaction.
3. The use of technology has drastically improved productivity across various industries in recent years.
4. Regular breaks during work hours can enhance focus and ultimately lead to greater productivity.
5. To measure productivity accurately, businesses need to consider both quantitative and qualitative outputs.
