

# PROEMBRYO

*Meaning: Proembryo refers to the early developmental stage of a plant embryo, occurring after fertilization and before the formation of a mature embryo.*

1. The proembryo stage is crucial for the initial development of the plant embryo.
2. Researchers are studying the genetic factors that influence proembryo formation in various species.
3. In some plants, the proembryo can differentiate into multiple cell types before maturation.
4. Understanding proembryo development can enhance agricultural practices and crop yields.
5. The transition from a proembryo to a fully formed embryo marks a significant step in plant growth.
