

PROPIONYL

Meaning: Propionyl is a chemical group derived from propionic acid, often involved in the synthesis of organic compounds and influencing the properties of polymers.

1. Propionyl is often used in the synthesis of various organic compounds.
2. The presence of propionyl groups can significantly influence the properties of the resulting polymer.
3. Researchers discovered that propionyl derivatives exhibit interesting biological activities.
4. In the laboratory, propionyl chloride is frequently employed as a reagent in chemical reactions.
5. The study focused on the metabolism of propionyl-CoA in mitochondrial pathways.
