

# PROTEOLYTIC

*Meaning: Proteolytic refers to the ability to break down proteins into smaller peptides and amino acids, typically through the action of enzymes.*

1. Proteolytic enzymes are essential for breaking down proteins into smaller peptides and amino acids.
2. The study focused on the proteolytic activity of certain bacteria in the human gut.
3. Inhibiting proteolytic pathways can lead to the accumulation of misfolded proteins in cells.
4. Researchers are exploring proteolytic therapies to target cancerous cells more effectively.
5. The proteolytic process is crucial for digestion and overall nutrient absorption in the body.
