PROTOPLASTIC

Meaning: Protoplastic refers to the living part of a cell, including the cytoplasm and organelles, essential for its biological functions and growth.

1. The protoplastic nature of the cell revealed its fundamental biological processes.
2. In plant biology, the protoplastic components are crucial for cellular functions and growth.
3. Research on protoplastic interactions has opened new avenues in cell biology.
4. Understanding protoplastic differentiation can lead to advancements in tissue engineering.
5. The protoplastic layers of the cell membrane play a vital role in nutrient absorption.
