

PSEUDO-DIPTERAL

Meaning: Pseudo-dipteral refers to an architectural design that resembles a double colonnade with an illusion of additional columns, typically achieved by placing columns only along the front and rear of a structure.

1. The architectural design features a pseudo-dipteral arrangement, giving the illusion of an extra row of columns.
2. In classical architecture, a pseudo-dipteral temple appears to have a double colonnade but is structurally simpler.
3. The museum's entrance showcases a pseudo-dipteral facade that enhances its grandeur without the expense of a full colonnade.
4. Scholars often debate the aesthetic merits of pseudo-dipteral versus true dipteral temple designs in ancient Greek architecture.
5. The architect's use of a pseudo-dipteral layout effectively creates a sense of depth and complexity in the building's exterior.
