

# PSEUDO-HYPERTHOPHIC

*Meaning: Pseudo-hypertrophic refers to a condition characterized by an apparent increase in muscle size due to the accumulation of fat or connective tissue rather than actual muscle growth or strength.*

1. The athlete was diagnosed with pseudo-hypertrophic muscular dystrophy, a condition that led to an unusual increase in muscle size without strength.
2. In the realm of medical research, pseudo-hypertrophic changes can often confuse clinicians during diagnosis.
3. His muscles appeared well-developed, but a deeper examination revealed they were pseudo-hypertrophic rather than indicative of true strength.
4. The study focused on the genetic markers associated with pseudo-hypertrophic disorders, aiming to improve early detection.
5. Despite the impressive appearance of his physique, the trainer noted that the pseudo-hypertrophic condition hindered his performance.
