

PSEUDO-PERIPTERAL

Meaning: Pseudo-peripteral refers to an architectural style that creates the appearance of a peripteral temple, typically characterized by a single row of engaged columns along the exterior walls, giving the illusion of being surrounded by columns.

1. The temple was designed in a pseudo-peripteral style, giving it the illusion of being surrounded by columns.
2. In architecture, a pseudo-peripteral building often features engaged columns that create a striking visual effect.
3. The museum showcased a model of a pseudo-peripteral structure, demonstrating the blend of classical and innovative design elements.
4. Many ancient architects employed pseudo-peripteral layouts to enhance the grandeur of their temples without the expense of a full colonnade.
5. The restoration of the historic site aimed to preserve its pseudo-peripteral characteristics while updating its structural integrity.
6. The ancient temple was designed in a pseudo-peripteral style, giving the illusion of a colonnade without the structural support.
7. Despite its pseudo-peripteral appearance, the building's true architectural integrity lay in its robust inner columns.
8. Visitors admired the pseudo-peripteral layout that enhanced the grandeur of the structure while maintaining a more compact footprint.
9. Architects often utilize a pseudo-peripteral design to create a sense of openness while optimizing available space.
10. The museum's facade featured a pseudo-peripteral arrangement, skillfully blending classical elements with modern aesthetics.
