

PSYCHROMETER

Meaning: A psychrometer is an instrument used to measure atmospheric humidity by comparing the temperatures of a wet-bulb and dry-bulb thermometer.

1. A psychrometer is an essential instrument for measuring humidity in the atmosphere.
2. To determine the dew point, meteorologists often rely on a psychrometer during their forecasts.
3. In laboratories, a digital psychrometer provides precise readings of both wet and dry bulb temperatures.
4. The psychrometer indicated a high level of moisture in the air, suggesting impending rain.
5. Using a psychrometer can help farmers better understand the microclimates of their fields.
