

PYURIA

Meaning: Pyuria is the presence of pus or white blood cells in the urine, often indicating an infection or inflammation in the urinary tract.

1. Pyuria is often a sign of urinary tract infection and can be detected through a simple urine test.
2. Patients presenting with pyuria should be evaluated for potential underlying causes such as kidney stones or infections.
3. The presence of white blood cells in the urine, known as pyuria, can indicate inflammation in the urinary system.
4. In some cases, pyuria may occur without any symptoms, making it important for routine screenings in at-risk populations.
5. Treatment of pyuria typically focuses on addressing the underlying infection or condition contributing to the symptom.
