

QUADRATIC

Meaning: Quadratic refers to a polynomial of degree two, typically represented in the form $ax^2 + bx + c$, where a , b , and c are constants, and it often corresponds to a parabolic graph.

1. The quadratic equation can be solved using various methods, including factoring and completing the square.
2. In mathematics, a quadratic function is often represented as a parabola on a graph.
3. The roots of a quadratic polynomial can be found using the quadratic formula.
4. Students in algebra are typically introduced to quadratic equations in their first year of high school.
5. The shape of a quadratic curve can vary depending on the coefficients of its terms.
