

QUICKLIME

Meaning: Quicklime is a white, caustic alkaline substance (calcium oxide) produced by heating limestone, commonly used in construction and chemical processes.

1. Quicklime is often used in the construction industry for its ability to bond materials effectively.
2. When water is added to quicklime, it undergoes a chemical reaction that produces heat and slaked lime.
3. Farmers occasionally use quicklime to improve soil quality by adjusting pH levels.
4. The safety precautions for handling quicklime include wearing protective gear to avoid skin irritation.
5. In ancient times, quicklime was utilized in the production of mortar for building durable structures.
