

# RACEMULOSE

*Meaning: Racemulose is a rare sugar composed of a mixture of D- and L- forms of a monosaccharide, found in specific plants and involved in certain metabolic processes.*

1. Racemulose is a rare type of sugar that can be found in certain plants.
2. The study focused on the metabolic pathways involving racemulose in microbial fermentation.
3. Researchers discovered that racemulose plays a crucial role in the synthesis of specific polysaccharides.
4. Racemulose's unique structure allows it to interact differently with enzymes compared to other sugars.
5. Understanding the properties of racemulose could lead to advancements in agricultural biotechnology.
