

RADIATOR

Meaning: A radiator is a heating device that transfers thermal energy to a fluid, typically water or steam, to warm a room or building.

1. The old radiator clanked loudly as it struggled to heat the room.
2. She adjusted the thermostat to ensure the radiator would warm the house efficiently.
3. After years of use, the radiator developed a small leak that needed immediate repair.
4. In the winter months, sitting near the radiator became my favorite spot to read.
5. He noticed that the radiator was not getting hot, indicating a possible issue with the heating system.
