

RADICALS

Meaning: Radicals are individuals or groups advocating for fundamental political or social changes, or in chemistry, they are atoms or molecules with unpaired electrons that exhibit high reactivity.

1. The political radicals pushed for sweeping reforms to address social inequalities.
2. In chemistry, radicals are atoms or molecules that have unpaired electrons, making them highly reactive.
3. The environmentalists argued that only radical changes in policy could effectively combat climate change.
4. Some radicals advocate for extreme measures to achieve their goals, often leading to controversy.
5. The debate between moderates and radicals often shapes the direction of the movement.
