

RADIOGRAPH

Meaning: A radiograph is an image produced on a sensitive surface, such as film or digital media, by the exposure to ionizing radiation, used primarily for medical or dental diagnosis.

1. The radiograph revealed a fracture that was not visible during the physical examination.
2. She studied the radiograph closely to determine the extent of the dental decay.
3. Radiographs are essential tools in diagnosing various medical conditions effectively.
4. After reviewing the radiograph, the doctor decided that immediate intervention was necessary.
5. The technician carefully positioned the patient before taking the radiograph to ensure accuracy.
