

RADIOMETER

Meaning: A radiometer is an instrument used to measure the intensity of radiation, particularly solar or thermal energy, through the movement of its vanes.

1. The scientist used a radiometer to measure the intensity of solar radiation in the laboratory.
2. During the experiment, the radiometer's spinning vanes provided valuable data on thermal energy.
3. An accurate radiometer can help researchers understand the effects of light on various materials.
4. The innovative design of the new radiometer allows for easier calibration and more precise readings.
5. Students were fascinated to see how the radiometer reacted to different wavelengths of light.
