

RAPILLI

Meaning: Rapilli are small fragments of volcanic rock or ash ejected during an eruption, typically measuring between 2 and 64 millimeters in diameter.

1. The volcanic eruption scattered rapilli across the landscape, covering everything in a fine layer of ash.
2. Researchers collected samples of rapilli to study the composition and behavior of volcanic materials.
3. During the hike, we encountered a field of rapilli that seemed to glisten in the sunlight.
4. The texture of the rapilli was rough and jagged, making it difficult to walk on without proper footwear.
5. In ancient times, the presence of rapilli indicated recent volcanic activity, serving as a warning to nearby settlements.
