

RAPTORES

Meaning: RAPTORES: A term referring to birds of prey or, in a paleontological context, a group of carnivorous dinosaurs known for their hunting skills, often characterized by sharp claws and agility.

1. The paleontologist studied the fossils of various raptors to understand their hunting behaviors.
2. In the movie, the protagonists were chased by a pack of genetically engineered raptors.
3. Raptors, known for their agility and sharp claws, were formidable predators in their ecosystems.
4. The exhibit at the museum showcased life-sized models of different raptors from the Jurassic period.
5. Many bird species today, like eagles and hawks, are considered modern-day descendants of the ancient raptors.
