

RAPTORIAL

Meaning: Raptorial refers to the predatory characteristics or adaptations of birds, particularly those that enable them to catch and kill prey, such as sharp talons and keen eyesight.

1. The raptorial nature of the eagle allows it to catch prey with remarkable speed and precision.
2. Many species of raptorial birds have keen eyesight that helps them spot small animals from great heights.
3. The raptorial claws of the hawk are specially adapted for grasping and killing its prey.
4. In the documentary, they featured various raptorial species and discussed their hunting techniques.
5. The raptorial behavior exhibited by this owl at dusk showcases its efficiency as a nighttime predator.
