

RATTOON

Meaning: Ratoon refers to a new shoot or sprout that grows from the base of a plant, particularly after it has been cut or harvested, enabling continued growth and reproduction.

1. The farmer noticed a ratoon sprouting from the base of the sugarcane stalk.
2. In the wild, some plants reproduce through a process called ratooning, allowing them to thrive after harvest.
3. After cutting the bamboo, the gardener was pleased to see the new ratoon shoots emerging quickly.
4. Ratooning can significantly improve the yield of certain crops if managed properly.
5. The ratoon system of cultivation has been used for centuries in various agricultural practices around the world.
6. The farmer decided to ratoon the sugarcane field to encourage new growth.
7. After harvesting the crop, she was pleased to see the ratoon shoots emerging quickly.
8. Ratooning is a common practice in tropical agriculture to maximize yield from established plants.
9. The ratoon system allows for a more sustainable approach to farming by reducing soil disturbance.
10. Farmers often prefer ratooning as it can lead to a faster return on investment with less labor.
