

# REACTOR

*Meaning: A reactor is a device or structure in which a controlled nuclear reaction occurs, typically used for generating energy or conducting scientific research.*

1. The nuclear reactor generated enough energy to power the entire city.
2. Scientists conducted experiments to study the behavior of materials inside the reactor.
3. Safety protocols were strictly enforced at the reactor site to prevent any accidents.
4. Innovations in reactor design are crucial for advancing sustainable energy production.
5. The team monitored the reactor's output to ensure it operated at optimal efficiency.
